

Commercial 95 & Commercial 300FR

Material Cleaning Instructions

1. With the shade sail either tensioned in its usual place or laid out on a clean smooth surface, fully dampen the fabric using fresh water from a low pressure hose.
2. Using a mild ph neutral household detergent mixed with warm water in a bucket, gently apply the detergent to the sail with a soft brush, being careful not to damage the fabric.
3. Allow the soap suds to settle for a few minutes to dissolve the dirt, but do not allow it to dry.
4. Once the whole sail has been covered, rinse thoroughly with fresh water.
5. Repeat the process as many times as necessary to remove all the dirt.

Warning – Do not use a high pressure hose as this risks damaging the fabric and limiting its UV protection
